PROBLEM STATEMENT

Businesses often struggle to manually analyze competitor strategies, market positioning, customer engagement, and industry trends. Traditional competitor research is time-consuming, requires continuous monitoring, and makes it difficult to quickly identify strengths, weaknesses, and emerging opportunities. This project develops an AI-powered Competitor Analysis Assistant that automates competitor research by collecting and summarizing competitor insights, comparing strengths and weaknesses, identifying market trends, and generating strategic recommendations to support faster and smarter business decision-making.

SOLUTION OVERVIEW

The Competitor Analysis Assistant uses AI to simplify market research and competitive analysis. Users can provide competitor names, websites, or business details, and the system generates structured insights including competitor strategies, product positioning, market trends, and performance comparisons. The assistant helps organizations understand competitor advantages, identify gaps in the market, and improve strategic planning. By leveraging AI-based summarization and trend analysis, the solution reduces manual effort and enhances decision-making efficiency.

KEY FUNCTIONALITIES

Competitor Input

Allows users to enter competitor names, business domains, or websites for analysis.

Strategy Analysis

Analyzes competitor strategies, services, and market positioning.

Trend Identification

Detects market trends, customer preferences, and emerging opportunities.

Insight Generation

Provides AI-generated recommendations and strategic business insights.

Strength & Weakness Comparison

Compares multiple competitors based on features, performance, and business advantages.

TOOLS & INTEGRATIONS

AI Assistant

ChatGPT

Web inputs

Online competitor data sources and market research inputs

Workspace

Notion & Google Sheets
